

FIG. 1 is a block diagram of a system 100 for order processing. The system 100 includes a customer computer 110, a manufacturing computer(s) 130, a sales computer(s) 135, a computer network 105, and an order processing computer 120. The customer computer 110 includes order software 112 (e.g., browser). The manufacturing computer(s) 130 and sales computer(s) 135 are connected to the computer network 105. The computer network 105 is connected to the order processing computer 120 via an interface 128. The order processing computer 120 includes memory 126 and a processor 124. The memory 126 includes an order application 150, which includes an order comparator routine 152. The processor 124 includes an order process 160, which includes an order comparator process 162. The order processing computer 120 is also connected to an order database 190-1, which includes fields 250 and 265. The system 100 also includes two order databases 190, each with fields 250 and 265, connected to the manufacturing computer(s) 130 and sales computer(s) 135, respectively. The system 100 is shown with a reference numeral 100 and a dashed line 100-1.
